

Dear PhD students,

The workshop is primarily for undergraduate and Master students. The inclusion of PhD students is on a **case-by-case basis**.

For a PhD student to be eligible to participate, they need to provide to me with the following:

1. Email from their PhD supervisor to me – just a short email indicating why and how the workshop(s) will benefit the students
2. Email from the QU-Health PhD coordinator approving your participation. Please specify the workshop(s) you are interested to join.

The **registration will be done through email**, not through the website. I will manually add you to the system.

Please specify which workshop you are interested in participating, we have two: 1) Bioinformatics Summer Workshop and 2) Bioinformatics Workshop Series. For the Bioinformatics Workshop Series, you do not need to provide me with the above for each module. Specifying the theme that you are interested in is enough.

Thank you.
